## Row Cleaner Air Adjust System

*It's easy to add Smart Clean to any planter or strip till bar  
For optimized Row Cleaner control at your finger tips!*

- Electronic Proportional Control valves automatically adjust to maintain desired psi
- Can be set in 1% (lbs.) increments
- App runs in background on your Smart Phone or Tablet
- Robust Bluetooth signal allows control of row cleaners while riding alongside or behind planter.
- System defaults back to last settings when power is cycled or connection is lost
- No bulky boxes or air lines in cab
- Bi-Directional control option allows for pressurizing both sides of cylinder at same time (Dual Valve only)
- Now available ISOBUS connection for easy control through your in cab monitor

### Smart Clean System & ACCR1360 Row Cleaner

Mike DeMean — Springville, IA

For years I have been looking for a row cleaner that I could go from conventional tillage all the way through to no-till. One that is also easy to adjust from the cab, along with being dependable and durable. By installing the CCR 1360 row cleaner and Smart Clean air control system - I have now found it. It worked flawlessly from the first time in the field. I am extremely happy with the setup. It saves a lot of time, and I look forward to using it for many years. The dependability and durability of the Martin products is evident. It's the reason I sought out a system from Martin Industries.

*The Smart Clean™ System makes manual row cleaner adjustments a thing of the past an easy to use app to raise lower your row cleaners.*

**Single Valve** with one directional control valve lets you set psi then select up down or float.

**Dual valve** with one directional control valve works same as single valve plus you can set psi on a second circuit to control air bags.

**Dual valve** with two directional control valves allows section control for left right or front gang back gang. Control each section independently.

**Bi-directional** uses two valves allowing you to set separate air psi on both sides of piston. This method gives best control and does not come with a directional control valve.
